

Breakthrough

Welcome to the new age of
magnetic compression anastomosis

GT Metabolic™ is leading the world with the **GT Metabolic™ MagDI™ System**, a proprietary linear magnetic technology (LMT) designed for magnetic compression anastomosis.¹ This incisionless, sutureless, and staple-free technique¹⁻⁴ is intended for use in creating side-to-side duodeno-ileal anastomosis in minimally invasive and laparoscopic surgeries.¹ Once the tissue has healed sufficiently to maintain the anastomosis, the device is naturally passed from the body, leaving no foreign material behind to impede the natural healing process.¹⁻⁴ The **MagDI™ System** is the only FDA-cleared and commercially available product for magnetic compression anastomosis.¹

MagDI™ System by GT Metabolic™

A gentle, minimally invasive surgery tool

MAGDI™
MAGNET

- The 40mm¹ or 50mm⁵ Parylene-C coated neodymium magnet is encased in a titanium shell with a PGLA bio-fragmentable flange.
- A delivery system connect/release mechanism is located at one end of the magnet.
- The device is intended for use for side-to-side duodeno-ileal anastomosis in minimally invasive and laparoscopic surgery.¹
- Sterile; disposable.

MAGDI™
DELIVERY SYSTEM

- The delivery system is a disposable, flexible, orogastric delivery catheter 198cm in length that attaches to the linear MagDI™ magnet for placement and positioning.
- The proximal end of the catheter consists of a ring-handle pull-trigger for easy deployment of the magnet.
- The delivery system catheter must be paired with a flexible endoscope with a working channel of at least 2.8mm or greater.
- Sterile; disposable.

MAGDI™ LAPAROSCOPIC
POSITIONING DEVICE

- The 41cm-long reusable laparoscopic positioning device (LPD) is compatible with a 12mm trocar.
- The instrument is comprised of a Parylene-C coated neodymium magnet encased in a titanium housing, non-magnetic shaft, and positioning handle detailing the strength of the instrument.
- Offered in five magnetic strengths, the LPD provides surgeon with options depending on patient's bowel morphology. (A higher number indicates greater magnetic strength.)
- The LPD is used to position the linear magnetic technology (LMT) at the desired anastomotic site.
- Reusable; requires sterilization.

Code	Description	Quantity
MAG-01	GT Metabolic™ MagDI™ magnet – 40mm	1 ea / 1 box
MAG-02	GT Metabolic™ MagDI™ magnet – 50mm	1 ea / 1 box
DS-01	GT Metabolic™ delivery system	1 ea / 1 box
PD-12	GT Metabolic™ laparoscopic positioning device (LPD)	1 ea / 1 box
PD-18	GT Metabolic™ laparoscopic positioning device (LPD)	1 ea / 1 box
PD-21	GT Metabolic™ laparoscopic positioning device (LPD)	1 ea / 1 box
PD-24	GT Metabolic™ laparoscopic positioning device (LPD)	1 ea / 1 box
PD-27	GT Metabolic™ laparoscopic positioning device (LPD)	1 ea / 1 box
PD-SET	GT Metabolic™ laparoscopic positioning device (LPD) set	5 ea / 1 box
